

# SQL string, date, and miscellaneous functions – Lesson overview

Mastering the complexities of **string, date, and miscellaneous functions** is paramount for effective data manipulation, as they serve as **fundamental tools for transforming and analysing data with precision**.

In this lesson, we'll take a look at manipulating textual and DateTime data in SQL. Additionally, we will explore miscellaneous functions that are valuable for converting between various data types.

## Learning objectives

- Convert from one data type to another.
- Identify and replace null values.
- Remove leading and trailing white spaces from string values.
- Extract portions of a string based on specified start and end positions.
- Combine multiple string values into a single string.
